

Project C.A.S.P. - Weekly Update 7

Ryan Tedeschi, Dylan Carson, Chris Bowlen

March 20, 2017

1 Development Progress

In the past week, the team suffered a setback involving the parse functionality in the Control Module. Ryan was able to fix the majority of the issue and successfully parse a for-loop, leading way for the Analyze Module to be successfully implemented. Due to the setback, Dylan was unable to work on the Analyze module, so he took Ryan's task for the week in working on the Outline Module. He has also begun pseudo coding and looking at the problems that could occur for the Lint and Outline Module. This is to help move the development along once we get the control module working. Chris has yet to contact the team, despite attempts to reach out to him.

2 Weekly Tasks

In the coming week, Dylan will continue work on the implementation of the Analyze Module. This will include collaborating with the team to make sure it is working properly and to test it. Any bugs or unforeseen difficulties will be discussed with the group so that it does not affect or slow down any other processes to severely. Ryan will work on the Outline module as well as keep an eye on any problems the control module might put out. He will do the same as Dylan and keep the team updated with bugs of unforeseen difficulties. If Chris resumes contact, he will work on the Translate Module. The entire team will continue to outline the other modules that have not been started. By doing this, it will help coding them when we get to them.
